presents

Crowdsourcing Disease Surveillance Data with Mobile Phones: A Multidisciplinary Approach.

José Tomás Prieto, BEng, MSc, PhD

Mobile-crowdsourced data could strengthen limited and delayed disease information from hospital- and laboratory-based surveillance. Using health economics and organizational theory principles, I will discuss different mobile-health projects in Guatemala, where we used text-messages and an app to collect and test health information.

Tuesday, August 21st 2018

12:00 PM – 1:00 PM

WBRB (Whitehead Biomedical Research Building) Auditorium

Room G01

615 Michael St., Atlanta, GA 30322
